SMP-WEB series is a web-based networked digital signage system. All multimedia contents are displayed in full-screen webpage, so designers can utilize their own familiar web-editing tools and unleash their creativities. SMP-WEB series supports most popular web languages, image file formats, audio/video codec. SMP-WEBPLUS can furthermore support HD (High Definition) videos and portrait display. In addition to Flash, HTML, video, images, animations, and texts, SMP-WEB/WEBPLUS can easily be extended to provide interactive services incorporating with external devices such as touch screen, keyboard, keypad, or mouse.

1-4 Hardware Specifications

1-4-1 SMP-WEB

Dimension	48.5 (H) x 234 (W) x 175 (D) mm
Material	Aluminum + Plastic (Out-Side Cover)
Color	Blue / Silver
Weight	1 Kg (May different between models)
Network	10/100 Mbps Ethernet
Internal Storage	40G Byte, 2.5" IDE HD
Video	VGA D-Sub, Composite/S-Video (NTSC/PAL)
Audio	Phone Jack (Stereo) / Optical
Power	100~240V AC
Others	RS-232 (COM) , 3 x USB

1-4-2 SMP-WEBPLUS

Dimension	44 (H) x 380 (W) x 195 (D) mm
Material	Aluminum + Steel
Color	Silver / Black
Weight	3.5 Kg (without hard drive), 4.4 Kg (with hard drive)
Network	10/100/1000 Mbps Ethernet
Internal Storage	160G Byte, 3.5" IDE HD
Video	VGA D-Sub
Audio	Phone Jack (Stereo)
Power	100~240V AC
Others	RS-232 (COM), 4 x USB

1-4-3 SMP-WEB3/SMP-WEB3N

Dimension	44 (H) x 290 (W) x 150 (D) mm
Material	Steel
Color	Black
Weight	2.5 Kg (with hard drive)
Network	10/100 Mbps Ethernet
Internal Storage	40G Bytes, 2.5" IDE HD
Video Out	VGA D-Sub, Composite/S-Video (NTSC/PAL)
Audio Out	RCA Stereo
Video In (WEB3 only)	Composite (RCA)
Audio In (WEB3 only)	RCA Stereo
Power	100~240V AC
Others	RS-232 (COM), 4 x USB

NOTE

1. SMP-WEB series does not support animation GIF.
2. The maximum bit-rate and resolution might be different based on your file encoding methods. Please test the video on SMP player. Cayin does not guarantee all video files can be played on SMP-WEB properly.

1-6 Install SMP-WEB Series

1-6-1 Install Hardware

1. Open SMP package
2. Connect the power adapter to a socket. For SMP-WEBPLUS, you need to adjust the voltage manually to fit your country's setting. (Default 220V)
3. Connect the Ethernet to LAN port. (By default, SMP will get an IP address from a DHCP server.)
4. Connect the VGA cable to your screen. (The default screen resolution is 800x600.)
5. If you need to configure system settings directly on the player, please connect a keyboard and a mouse to any of the USB connectors.
6. Press the power button to turn on the system. Once you see the LOGIN page on the screen, you already complete the installation.

NOTE

At any time, you can switch between playback and Web Manager in a local screen. Plug a keyboard to SMP device; press Ctrl-F10 and switch to Web Manager Login page; press Ctrl-F1 and switch to playback mode.

NOTE

Except for the initial installation of SMP, we suggest you manage or change settings of SMP by remote PC, rather than directly on the player.

1-6-2 Login on SMP-WEB Series

After installing a SMP player, please login and complete the initial settings based on your network environment.

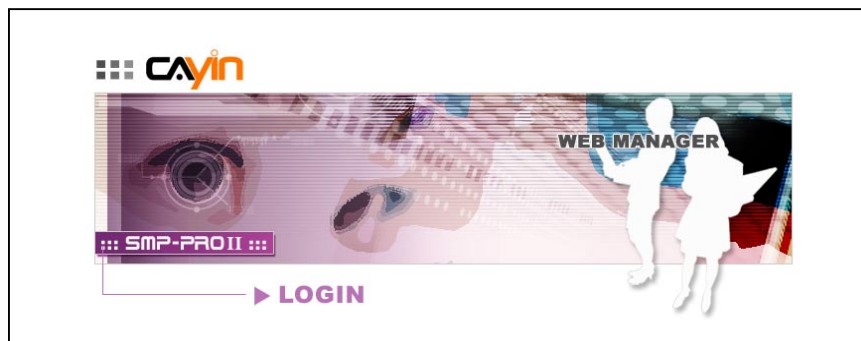

Ⓒ DHCP (Auto IP)

If you are in the DHCP network, SMP players will get an IP address automatically after installation. You can start to login the Web Manager page of the player directly after you connect a keyboard and a mouse to the SMP device.

1. Click **[LOGIN]** on the Web Manager, and enter a username and password.

Default Username: webadmin

Default Password: admin

Static IP

If you are in the static IP network, please follow below steps to login and complete network settings.

1. Connect a keyboard and a mouse to USB connectors on the SMP client and press the power button to turn on the system. Click [LOGIN] on the Web Manager, and enter a username and password.

Default Username: **webadmin**

Default Password: **admin**

2. After logging in Web Manager, click [NETWORK SETTINGS] on the left column. Then, click “Static IP Address” in the Ethernet Settings area and set up all related network settings for this SMP.
3. After completing, click [SAVE] at the bottom and click [APPLY] on the left column. Then, the SMP client will reboot.

1-6-3 Remote PC Login

If you try to manage SMP remotely on your own PC, please follow below steps:

1. Insert the product CD into your CD-ROM, and run “Cayin Device Seeker” (\Tool\Device Seeker\cysrch.exe). You can also copy this file to your PC for future management.
2. Click [**Seek**] and the seeker will search all available SMP clients or CMS servers in the same LAN. Select one player and double click the player’s name. Or, you can also click a player’s name, and click [**Open Web**].

3. You can also open the Media Folder of any player by [**Cayin Device Seeker**]. Select the player you want to connect, and click [**Open Folder**].
4. If your PC and the SMP player are not in the same LAN, you can open the browser and enter the IP address of the SMP player. After you login successfully, you can start to manage the SMP.

2. **Multimedia Contents Playback and Management**

2-1 Upload Files to SMP Player	14
2-2 Edit Playlist	16
2-2-1 Edit New Playlist	16
2-2-2 Set Default Playlist	19
2-2-3 Select Playlist From a Keypad Device	19
2-2-4 Check File Timestamp / RUL	20
2-3 Manage Playlist	21
2-3-1 Export Playlist	21
2-3-2 Import Playlist	22

NOTE

Your PC and the SMP player have to be in the same LAN, so that you can use Cayin Device Seeker to open the Media Folder of that SMP player.

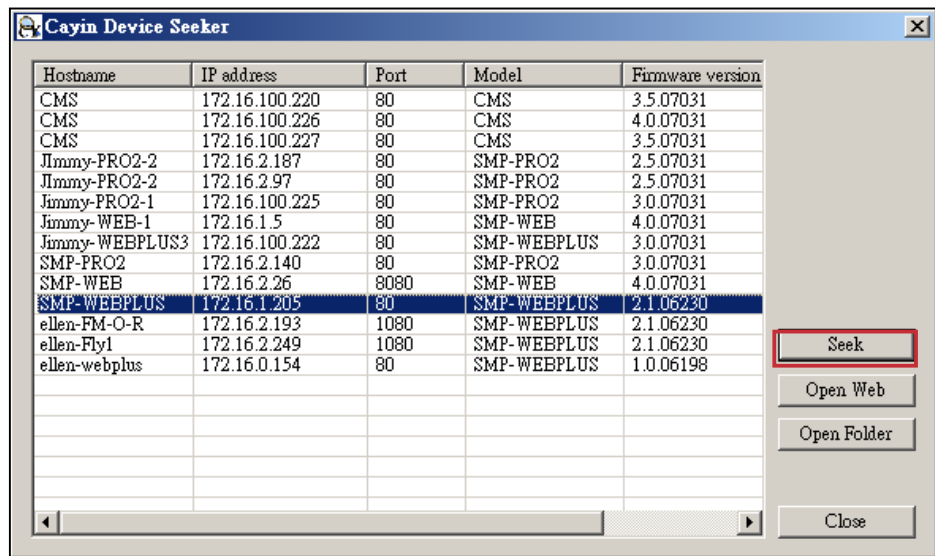

SMP-WEB series supports the playback of a variety of multimedia files. Users can upload all contents to the SMP player, and edit the playlist. Then, SMP-WEB series player will play files based on your pre-scheduled playlist. Users can also choose to manage playlist the content update from CMS server.

2-1 Upload Files to SMP Player

When you use SMP players without CMS server, you can choose one of the following methods to upload files to SMP-WEB series players.

Method 1:

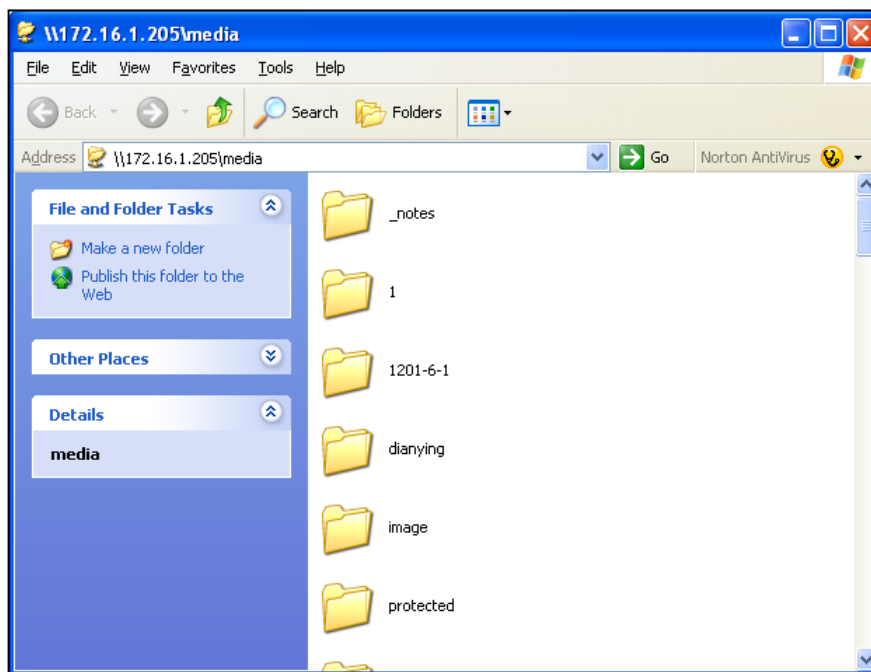

1. Insert the product CD into your CD-ROM, and run [Cayin Device Seeker] (\Tool\Device Seeker\cysrch.exe). You can also copy this file to your PC for future management.
2. Click [Seek] and the seeker will search all available SMP clients or CMS servers in the same LAN. When the devices are found, select the one you want to connect, and click [Open Folder].

3. Your PC will open File Explorer and you can see files or folders in your selected player.
4. Copy multimedia files from your PC to the SMP player via Network Neighborhood and then you can start to play those files in the SMP player.

Method 2:

- 1. Open [File Explorer], and enter the \\hostname or “\\IP address”. For example, if your hostname is SMP-WEBPLUS, please enter \\SMP-WEBPLUS or \\172.16.1.2.**

- 2. Copy multimedia files from your PC to the SMP player via Network Neighborhood and then you can start to play those files in the SMP player.**

2-2 Edit Playlist

You can edit playlists via Web Manager of SMP-WEB series player on your own PC.

2-2-1 Edit New Playlist

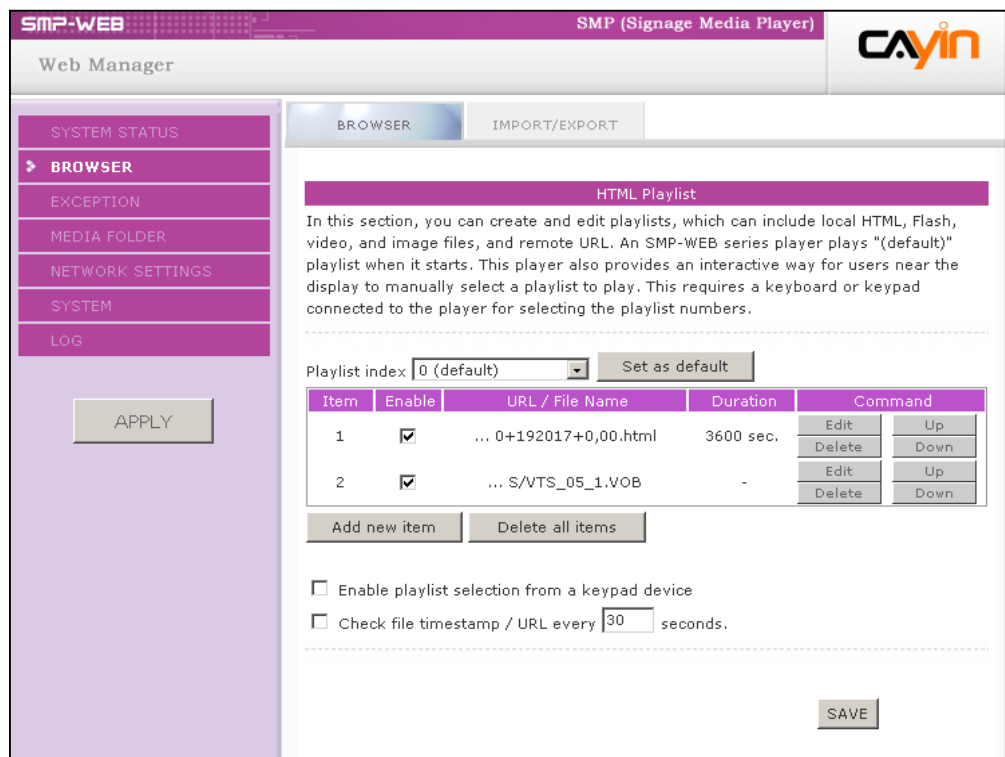

NOTE

You can edit at most 10 playlists of HTML/JPEG/SWF/VIDEO and add up to 99 items in each playlist.

Please follow the following steps to edit a new playlist for a SMP player.

1. Login SMP and enter Web Manager.
2. Click **[BROWSER]** and select the “BROWSER” page.
3. Locate the “Playlist index” drop-down menu, and select “0”. Then, you can start to add an item in the “Playlist 0”.

Click [Add new item] and open a “Add / Edit Entry” pop-up window.

HTML Playlist

In this section, you can create and edit playlists, which can include local HTML, Flash, video, and image files, and remote URL. An SMP-WEB series player plays "(default)" playlist when it starts. This player also provides an interactive way for users near the display to manually select a playlist to play. This requires a keyboard or keypad connected to the player for selecting the playlist numbers.

Playlist index: 0 (default) Set as default

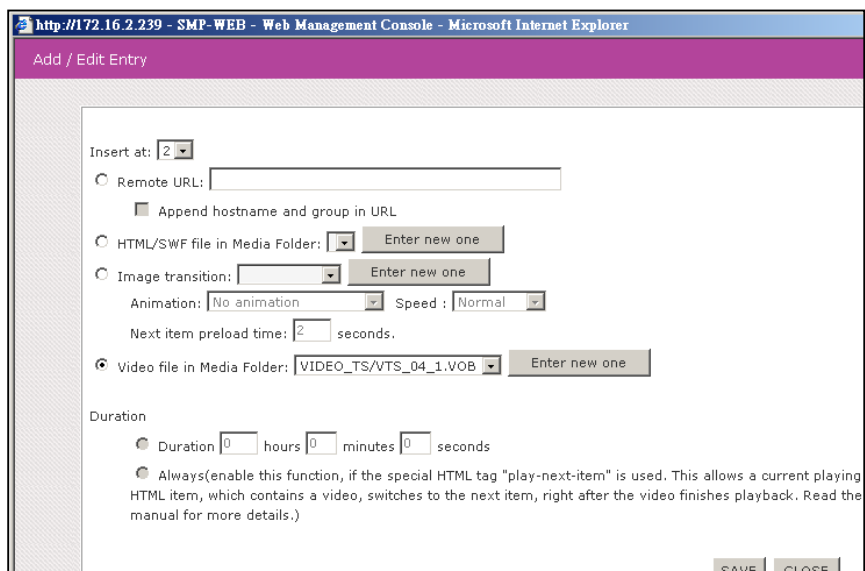

Item	Enable	URL / File Name	Duration	Command	
1	<input checked="" type="checkbox"/>	... 0+192017+0,00.html	3600 sec.	Edit	Up
				Delete	Down
2	<input checked="" type="checkbox"/>	... S/VTS_05_1.VOB	-	Edit	Up
				Delete	Down

Add new item Delete all items

Enable playlist selection from a keypad device
 Check file timestamp / URL every 30 seconds.

SAVE

- 5. In the “Add / Edit Entry” window, you can decide the sequence of this new item in the playlist. By default, the new item will be inserted as the last item. For example, if you already have five items in this playlist, the system will automatically place this new item at the sixth place by default. You can also choose to insert this new item between the first and fifth place. Please refer the following table for all detailed settings:**

NOTE

This method is similar to the way you use in your PC browser. SMP-WEB products do not support HTTPS (SSL) protocol currently.

Remote URL	<p>Specify a URL where SMP can connect to the html content, e.g. <code>http://remote_web_server/path/to/your.html</code> .</p> <p>You can also use dynamic server script, such as ASP, PHP, or CGI to generate the HTML page. Check the box Append Hostname Parameter and the system will append hostname/group parameter to the end of the html URL automatically. For example, you enter <code>http://remote_web_server/test.php</code> in this option, SMP-WEB will actually send a request as <code>http://remote_web_server/test.php?hostname=hostname&group=groupname</code></p> <p>The hostname here is the hostname that you configure in “4.1 NETWORK SETTINGS” at run-time.</p>
HTML/SWF file in Media Folder	<p>Select to play an html or swf file in the Media Folder. By default, CMS will automatically list all html and swf files in the Media Folder, so you can select an item here. If you haven’t uploaded your files in the Media Folder, you can also pre-edit the playlist by clicking [Enter new one] and entering the item (e.g. <code>/cayin/main.html</code>) directly in the text box.</p>

Image transition	<p>You can insert an image file (JPEG) as a display item or a transition between two HTML files by enabling this function. You can also configure the transition effect as follows. By default, CMS will automatically list all image files in the Media Folder, so you can select one here. If you haven't uploaded your files in the Media Folder, you can also pre-edit the playlist by clicking [Enter new one] and entering the item (e.g. /cayin/cartoon.jpg) directly in the text box.</p> <p>* Animation: The transition effect when the image enters and leaves the screen. We now provide four animations: "fly from top to bottom", "fly from bottom to top", "fly from left to right" and "fly from right to left".</p> <p>* Speed: The speed of animation effect.</p> <p>* Pre-load next item: You must set the time when you would like the system to start pre-loading the next item (eg. an html file) before the image disappears. For example, the duration of this image is 20 seconds and you want the system to start pre-loading the next item at the 15th seconds, you need to set the number "5 (seconds)" in the field. The number here depends on the loading time of the next item (html).</p>
Video file in Media Folder	<p>You can insert a video file as one of the items in the playlist, and display a full-screen video. By default, CMS will automatically list all video files in the Media Folder, so you can select one here. If you haven't uploaded your files in the Media Folder, you can also pre-edit the playlist by clicking [Enter new one] and entering the item (e.g. /cayin/cartoon.mpg) directly in the text box.</p>

NOTE

If you play video files in the Media Folder, you will not be able to set the duration of this video. The system will automatically play the next item in this playlist after the system finishes playing the whole video.

6. Finally, set the duration of each playback item. After the time is up, SMP-WEB will play the next item. If you configure the duration as "Always", the playlist will stop here, which means that SMP-WEB will keep playing this item without moving to the next item. You can still use 'play-next-item' tag to change the playlist item.
7. Click [**SAVE**] and [**CLOSE**] to complete the settings of an item.
8. Add more items to this playlist. If you want to adjust the order of the items, please click [**Up**] or [**Down**] to move forward or backward.
9. After completing settings, click [**SAVE**] and [**APPLY**].

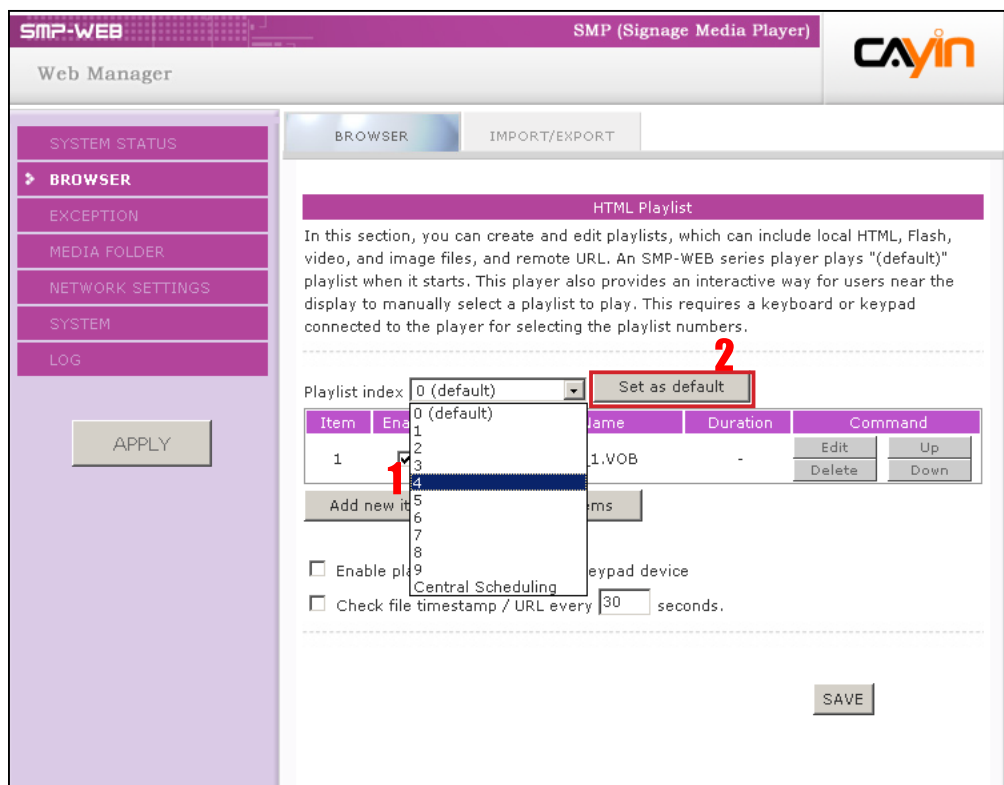

NOTE

Please remember to enable those items which you wish to play. SMP will only play those selected items. If you want to remove all items in this playlist, please click [**Delete all items**].

2-2-2 Set Default Playlist

SMP-WEB player can display only one active playlist at one time, so please click [Set as default] if you would like to play this selected playlist index. The index number with the word ‘default’ will be the default playlist and SMP-WEB/WEBPLUS player will automatically display items in that default playlist on the screen after system start-up.

2-2-3 Select Playlist From a Keypad Device

“Enable playlist selection from a keypad device” and you can change the playlist by clicking number keys at a keypad/keyboard device which connects to a SMP-WEB series player. You can edit up to 10 different playlists, and user can easily change it by clicking 0~9 key in keyboard or keypad.

2-2-4 Check File Timestamp / RUL

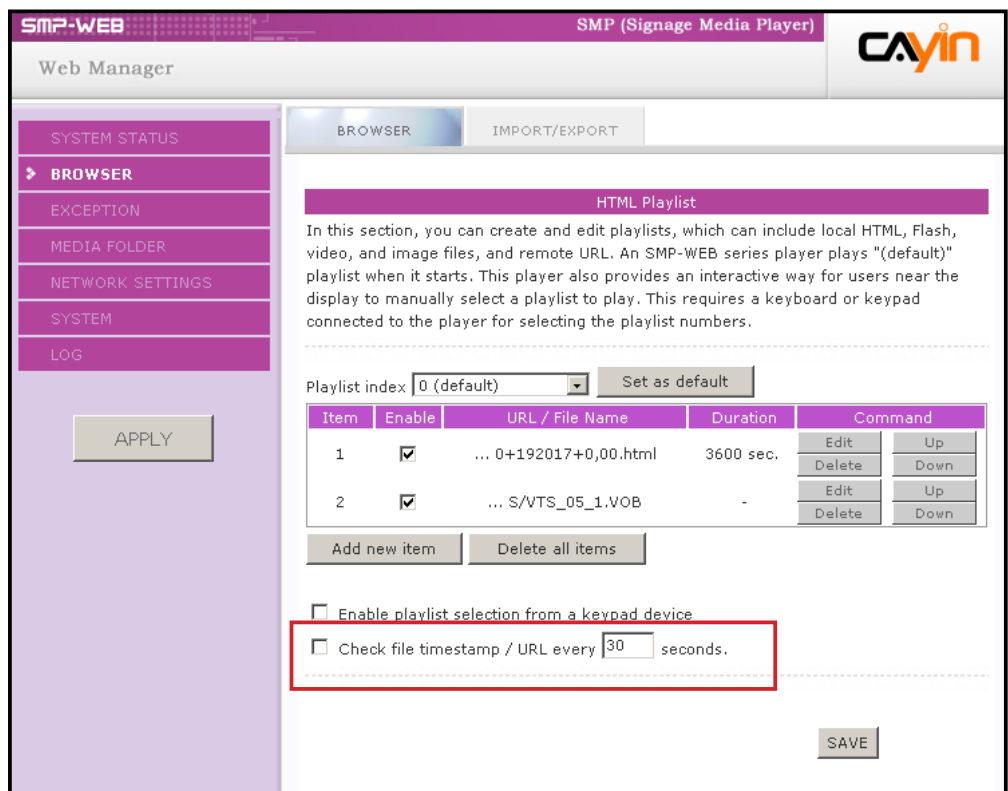

NOTE

SMP-WEB uses the following ways to determine if the file is updated.

* For remote URL: HTTP Last-Modified header tag

* For HTML file in Media Folder: File time

When the playlist includes HTML items either from a URL or the Media Folder, you can choose to enable “Check file timestamp / RUL every ... seconds”. The system will check the URL or HTML file and refresh the new web page according to your specified time. If there is no updated file, or even the file is removed, the system will keep playing the original one.

The screenshot shows the 'Web Manager' interface for the SMP (Signage Media Player). The left sidebar contains navigation options: SYSTEM STATUS, BROWSER (selected), EXCEPTION, MEDIA FOLDER, NETWORK SETTINGS, SYSTEM, and LOG. An 'APPLY' button is located below the sidebar. The main content area is titled 'HTML Playlist' and includes a description of playlist functionality. Below the description, there is a 'Playlist index' dropdown set to '0 (default)' and a 'Set as default' button. A table lists two playlist items:

Item	Enable	URL / File Name	Duration	Command
1	<input checked="" type="checkbox"/>	... 0+192017+0,00.html	3600 sec.	Edit Delete Up Down
2	<input checked="" type="checkbox"/>	... S/VTS_05_1.VOB	-	Edit Delete Up Down

Below the table are 'Add new item' and 'Delete all items' buttons. At the bottom, there are two checkboxes: 'Enable playlist selection from a keypad device' (unchecked) and 'Check file timestamp / URL every 30 seconds.' (unchecked). The '30' in the second checkbox is highlighted with a red box. A 'SAVE' button is located at the bottom right of the main content area.

2-3 Manage Playlist

NOTE

If you configure the “Pop-up Blocker” in your browser or disable “File Download”, the “Export” function will not be able to function properly. Please turn off your Pop-up Block or add SMP-WEB web manager in the “Allow Web sites list”. You can also try to press [Ctrl] key while you click the [Export] button. This works for most pop-up blocker program.

NOTE

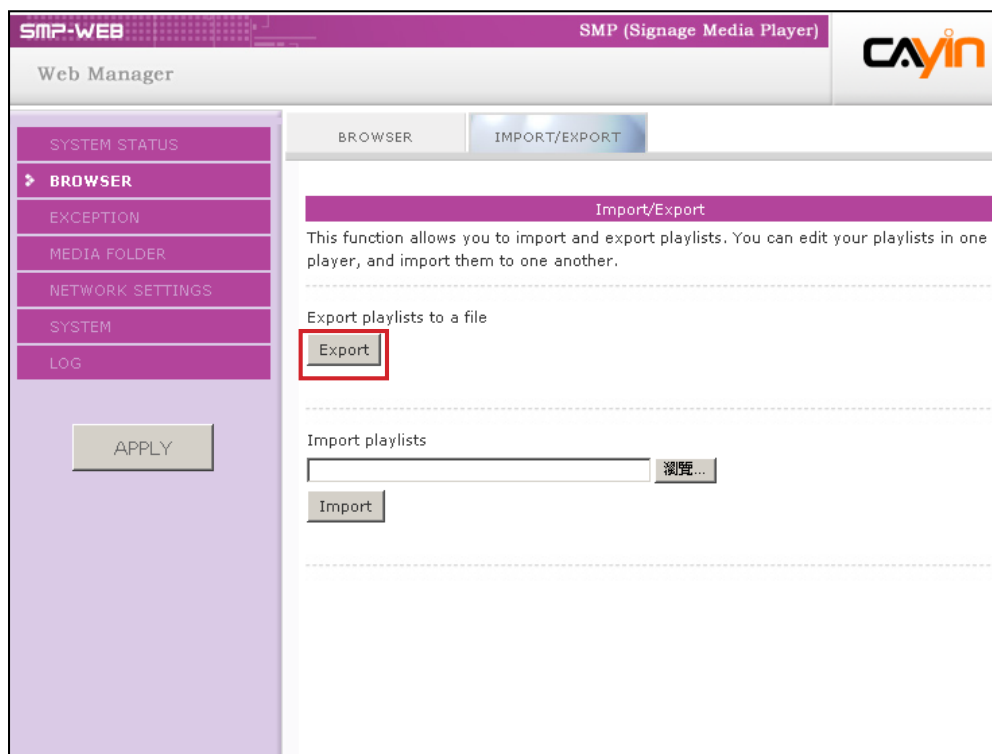

You cannot export a playlist when you operate directly on a SMP player. Please use a PC to login Web Manager via Ethernet and then export the playlist.

You can import or export playlists, so that you can save a lot of time while preparing them.

2-3-1 Export Playlist

Please follow the follow steps to export playlists to your PC.

1. Login SMP and enter Web Manager.
2. Click [BROWSER] and select the “IMPORT/EXPORT” page.
3. Click [Export] and you will see a pop-up window.

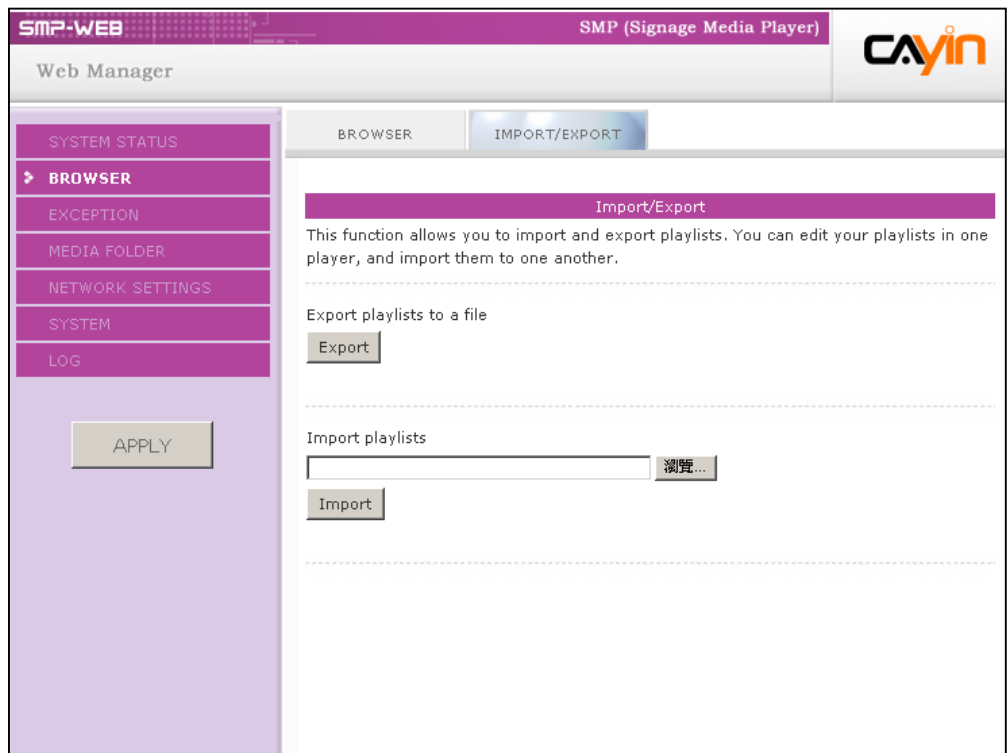

4. Click [SAVE] in the pop-up window and save the file to your designate path and folder. Then, you complete the backup.

2-3-2 Import Playlist

You can import playlist to other SMP players. To import playlist, please follow the steps:

1. Login SMP and enter Web Manager.
2. Click **[BROWSER]** and select the “IMPORT/EXPORT” page.
3. Click **[Browse]** in the “Import playlists” area and select a playlist file. Click **[Import]** and then the playlist will be imported into this SMP player.

3. Using Cayin Media Player in HTML

3-1 Media Player Tag and Attributes	24
3-2 Video Input Tag and Attributes.....	28
3-3 Examples	29

3-1 Media Player Tag and Attributes

Cayin's Media Player can be embedded into HTML tag, like Macromedia Flash. You can play media files in Media Folder or real-time streaming by using Cayin's media player. You can embed Cayin's media player into browser by defining the <object> tag in HTML.

The following picture depicts how you can display images and Cayin Media Player in a HTML page. You can see the complete content of this HTML page with a browser. Assign this HTML page as an item in the playlist of SMP-WEB series; then you present multi-media contents, like a web page, on the display.

We provide many useful "Tags" which you can include in your HTML page to control Cayin Media Player. Please refer to the following tables and examples.

HTML Code:

```

<object type="TYPE Attribute" height=" Object height (pixel)"
width=" Object width (pixel)">
  <param name="NAME Attribute " value=" value ">
  <param name="NAME Attribute " value=" value ">
  <param name="NAME Attribute " value=" value ">
  ...
</object>

```

TYPE Attribute:

Attribute	Attribute Value	Note
Type	video/mpeg video/main video/sub	<p>For SMP-WEB/WEB3/WEB3N, users can play video by using the tag “video/mpeg” or “video/main”.</p> <p>For SMP-WEBPLUS, users can play two videos in one HTML page. “video/main” represents the main video; “video/sub” represents the secondary video.</p> <p>If you decide to play two videos in one HTML page, we suggest that you assign the video with larger resolutions as the main video.</p> <p>We do not suggest you play two videos at the same time when you play HD (high resolution) video.</p>

NAME Attribute:

Attribute	Attribute Value	Note
src	file://folder/video_filename mms://ip_address/mms_url http://ip_address/http_url rtb://port rtb://multi_cast_ip:port rtp://port rtp://multi_cast_ip:port	file: play files in Media Folder mms: Microsoft MMS streaming http: http streaming rtb: Cayin RTB streaming rtp: Real-time Transport Protocol streaming Note: About 'src' attribute usage, see examples in the following section.
loop	1 (default) 0	Assign to play video repeatedly.
fullscreen	1 0 (default)	Display full-screen video.
hidden	1 0 (default)	By default (setting 0), the screen will not be hidden. When the player is hidden, the file will still be played and the sound will not be mute, if available.
ratio	auto (default) 4:3 / 1:1 / 16:9 / 2.11:1	Aspect ratio of media player window.
control-panel	1 0 (default)	Set the display mode of control-panel. If you enable this function, the panel will be shown by left clicking the mouse on the region of media player.
play-local-all	1 0 (default)	Play all files in the Media Folder.
play-server-schedule	1 0 (default)	Play files in Media Folder according to CMS's Central Scheduling settings. This option cannot be used with play-local-all.
play-folder-all	folder_name	Play all files in selected folder. Example: <param name="play-folder-all" value="folder_name">
play-next-item	1 0 (default)	Play next Web Playlist item when video playlist finished in this page. This option is exclusive with loop option (loop must be false).
random-playlist	1 0 (default)	Randomly play all items in a playlist
audio	1 (default) 0	Turn on / off sounds. In the case of two videos in a HTML page, the "sub-video" will automatically be turned off, when you set "true" for the "main video".

NOTE

You can play several files or streaming video sequentially when you add multiple “src” attribute to the HTML code.

Attribute and Usage of “src”:

“src” attribute is used to drive media player to play playlist. You can see some examples as follows:

a. Play videos in the Media Folder

```
<param name="src" value="file://folder/to/video.mpg">
```

b. Play mms or http streaming

```
<param name="src" value="mms://mms_server_and_url">
```

```
<param name="src" value="http://http_server_and_url">
```

c. Play RTB streaming**Broadcast and Uni-cast**

```
<param name="src" value="rtb://port">
```

Multicast

```
<param name="src" value="rtb://multicast_ip:port">
```

3-2 Video Input Tag and Attributes

NOTE

Please do not use the "video-in tag" and "media player tag" at the same time. The system might be overloaded and play videos with lags.

IMPORTANT: This tag is only supported by SMP-WEB3

If you want to display signals of AV-IN in web pages, you can insert the following Video Input tag. For some Video Input attributes (eg. NTSC/PAL), please refer to section 5.4.

```
<object type="video/video-in" height="Object height (pixel)" width="Object width (pixel)">
```

```
  <param name="NAME Attribute " value=" value ">
```

...

```
</object>
```

NAME Attribute:

Attribute	Attribute Value	Note
audio	1 (default) 0	Turn the Audio Input on/off
fullscreen	1 0 (default)	Display full-screen video

3-3 Examples

Example 1: Play the file, video.mpg, in the Media Folder repeatedly

```
<html>
<head>
</head>

<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="src" value="file://video.mpg">
<param name="loop" value="1">
<param name="ratio" value="4:3">
</object>
.....
</body>
</html>
```

Example 2: Play the file, video.mpg, in the Media Folder repeatedly and display in full screen

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="src" value="file://video.mpg">
<param name="fullscreen" value="1">
<param name="loop" value="1">
</object>
.....
</body>
</html>
```

Example 3: Play several video files in the Media Folder repeatedly

If you want to play many items, please add multiple “param” tag and set the ”name” as “src”. In the following example, the media player will play video files in the sequence of 1.mpg, 2.mpg, 3.mpg, 4.mpg, and 5.mpg.

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="loop" value="1">
<param name="src" value="file://1.mpg">
<param name="src" value="file://2.mpg">
<param name="src" value="file://3.mpg">
<param name="src" value="file://4.mpg">
<param name="src" value="file://5.mpg">
</object>
.....
</body>
</html>
```

Example 4: Play all video files in the Media Folder

If you want to play all files in the Media Folder, you can use the attribute “play-local-all”. Then, the media player will play all files in the alphabetical order.

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="loop" value="1">
<param name="play-local-all" value="1 ">
</object>
.....
</body>
</html>
```

Example 5: Play several video files in the Media Folder and move automatically to the next Web playlist after playing the previous one.

In the following example, the player will notify the browser and move to next web playlist item. We suggest you set the duration of all items in a web playlist as “Always”.

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="src" value="file://1.mpg">
<param name="src" value="file://2.mpg">
<param name="src" value="file://3.mpg">
<param name="play-next-item" value="1 ">
</object>
.....
</body>
</html>
```

Example 6: Control the playlist by CMS’s central scheduling

The media player will download the playlist in CMS when you use the tag “play-server-schedule”.

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="loop" value="1">
<param name="play-server-schedule" value="1 ">
</object>
.....
</body>
</html>
```

Example 7: Play all videos in a sub-folder and play files randomly

The media player will play files in a sub-folder of Media Folder with the attribute “play-folder-all”. You can also play the video files randomly with the attribute “random-playlist”.

```
<html>
<head>
</head>
<body>
.....
<object type="video/mpeg" WIDTH="320" HEIGHT="240">
<param name="loop" value="1">
<param name="play-folder-all" value="folder_name">
<param name="random-playlist" value="1">
</object>
.....
</body>
</html>
```

Example 8: Play two videos in one web page. (Only apply to SMP-WEBPLUS). SMP-WEBPLUS can play two videos in one web page by using attributes, “video/main” and “video/sub”.

```
<html>
<head>
</head>
<body>
.....
<object type="video/main" WIDTH="640" HEIGHT="480">
<param name="loop" value="1">
<param name="src" value="file://1.mpg">
</object>
.....
<object type="video/sub" WIDTH="320" HEIGHT="240">
<param name="loop" value="1">
<param name="src" value="file://2.mpg">
<param name="audio" value="0">
</object>
.....
</body>
</html>
```

Example 9: Hide a media player and play sounds (music) only

If you want to hide a media player and only play music, e.g. MP3, you have to create a CSS rule to control the attributes of “OBJECT” tag, and set the value of param name “hidden” as “1”.

```
<html>
<head>
<style type="text/css">
<!--
object {
    visibility: visible;
}
object.hiddenObject {
    visibility: hidden ! important;
    width: 0px ! important;
    height: 0px ! important;
    margin: 0px ! important;
    padding: 0px ! important;
    border-style: none ! important;
    border-width: 0px ! important;
    max-width: 0px ! important;
    max-height: 0px ! important;
}
-->
</style>
</head>
<body>
<object type="video/mpeg" HEIGHT="240" WIDTH="320" CLASS="hiddenObject">
<param name="src" value="file://1.mp3">
<param name="hidden" value="1">
</object>
</body>
</html>
```

Example 10: Play Audio Video input

```
<html>
<head>
</head>

<body>
.....
<object type="video/video-in" WIDTH="320" HEIGHT="240">
</object>
.....
</body>
</html>
```

4. Content Update and Media Folder Management

4-1 Update Media Folder	36
4-2 Manage Media Folder	40

NOTE

If you have files copied in the player and then enable content update from the CMS server folder, your files will be wiped out on the player side as the content of the folder on the server will synchronize with the Hard drive of the player. Therefore, if you want to edit SMP client's media folder manually, please DO NOT enable "Media Folder content synchronization".

NOTE

To prevent some media files from deleting by CMS server while you update content of SMP automatically from CMS, you can create a folder named "protected" and keep your files in that folder.

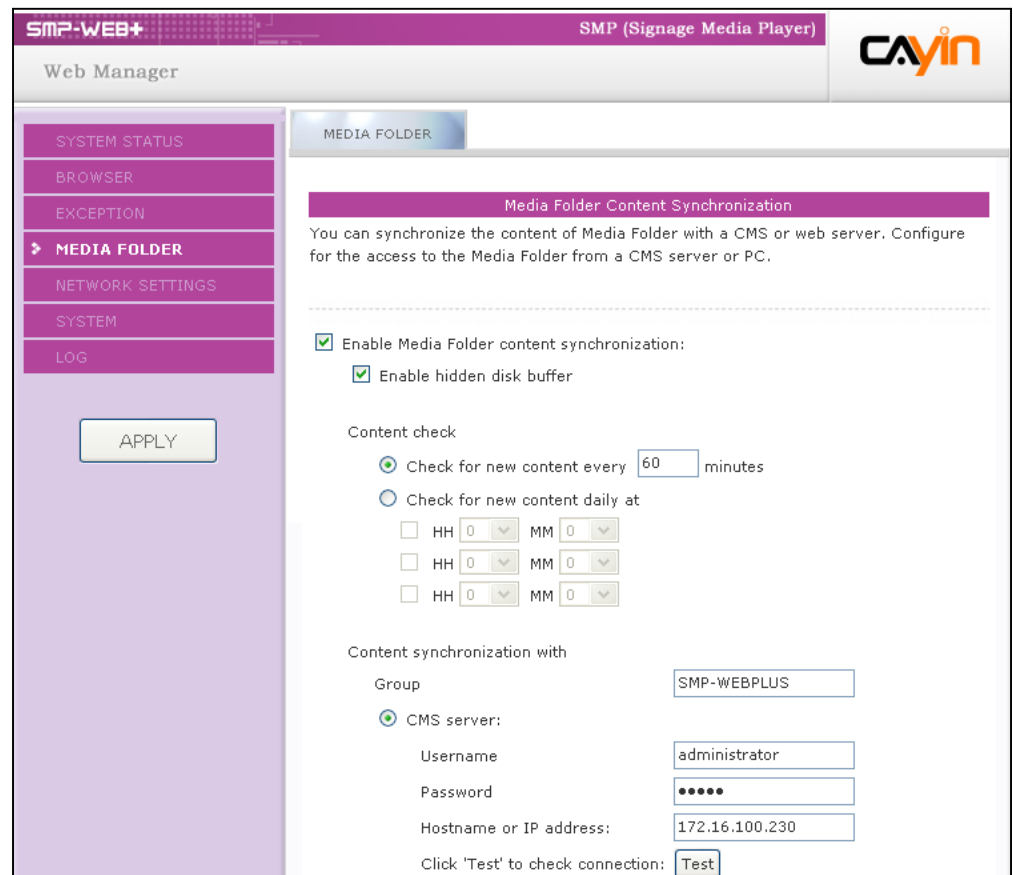

In this section, you can enable automatic content update function of Media Folder with CMS server. You can also configure the settings of access authorization of Media Folder.

4-1 Update Media Folder

In addition to Network Neighborhood, you can update the content of Media Folder automatically with CMS server or a web server.

Please specify the duplicate frequency and source of media files by completing the following settings of CMS server or entering the URL of a web server.

1. Login Web Manager; then click [MEDIA FOLDER] .

The screenshot shows the 'Web Manager' interface for 'SMP (Signage Media Player)'. The left sidebar contains a menu with options: SYSTEM STATUS, BROWSER, EXCEPTION, MEDIA FOLDER (selected), NETWORK SETTINGS, SYSTEM, and LOG. Below the menu is an 'APPLY' button. The main content area is titled 'MEDIA FOLDER' and contains a section for 'Media Folder Content Synchronization'. This section includes a header, a descriptive paragraph, and several configuration options:

- Enable Media Folder content synchronization:
 - Enable hidden disk buffer
- Content check:
 - Check for new content every 60 minutes
 - Check for new content daily at:
 - HH 0 MM 0
 - HH 0 MM 0
 - HH 0 MM 0
- Content synchronization with:
 - Group: SMP-WEBPLUS
 - CMS server:
 - Username: administrator
 - Password: [masked]
 - Hostname or IP address: 172.16.100.230
 - Click 'Test' to check connection: Test

2. Enable the “Media Folder content synchronization” function and SMP player will periodically download new or updated files from CMS’s Content Update Server. It also removes those files that no longer exist in CMS server.
3. Enable “Use hidden disk buffer”, if you would like to download files to a hidden disk space first. After downloading process completes, the system will copy all files to Media Folder at one time.

The advantage of this function is to make sure that SMP will not play incomplete contents. SMP will not play contents until all files are completely downloaded. We suggest you enable this option.

Enable Media Folder content synchronization:

Enable hidden disk buffer

NOTE

The maximum time interval is 10080 minutes.

4. If you want the SMP player can check with server for updated contents periodically, please set the frequency here.

Check for new content every [...] minutes	Set the time interval of checking with server
Check for new content at HH [...] MM [...]	Set the exact time when you wish to check with server. You can set up to 3 different time arrangements.

NOTE

For the Hostname of the CMS server, you must enter FQDN (full qualified domain name) here (eg. www.cayintech.com).

5. When you purchase a CMS server, you can create an account in the CMS server and authorize the account to manage the group which this SMP player belongs to. If you choose to update content by CMS, please enter the “Group” name, “Username”, and “Password” of the account, and the “Hostname or IP address” of the CMS server.

Content synchronization with

Group

CMS server:

Username

Password

Hostname or IP address:

Click 'Test' to check connection:

Web server:

NOTE

Central Scheduling of all contents (Multimedia, Image Slide Show, Ticker, and Skin) for a SMP player applies only one server configuration assigned here. Please remember to complete the server settings here before you start to use the function (Central Scheduling).

Group	Assign the group name which this SMP player belong to.
Username	The username is the account you create in CMS server, and this account should be authorized to manage this group.
Password	User's password.
Hostname or IP address	Hostname or IP address of CMS server

- After completing all settings, please click **[Test]** to check the validity of the account the IP address. Please note that the **[Test]** button can only be used to test the validity of the "Username", "Password" and "IP address". You can not check the existence of the "Group".
- You can also synchronize contents from your own web server, if you don't have a CMS server. Please enable "Web server" and enter the playlist's URL here.

Content synchronization with

Group

CMS server:

Username

Password

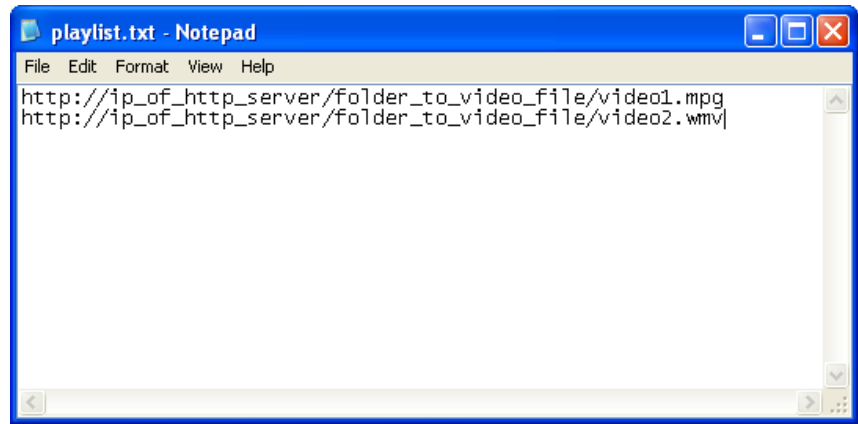

Hostname or IP address:

Click 'Test' to check connection:

Web server:

SMP player will send the HTTP request to the URL (e.g. <http://210.179.61.252/myvedio/playlist.txt>) and get the playlist (e.g. [playlist.txt](#)) from the server. Each line (e.g. <http://210.179.61.252/myvedio/video1.mpeg>) in the playlist file will be treated as one individual URL. SMP player will download new or updated URL(s) in the playlist, and remove the local files which do not exist in the playlist.

You may type a text file like below and enter the URL of this text file in this field:

By changing the text file, you can update the SMP player's playlist in media folder.

4-2 Manage Media Folder

In this section, you can set share mode of Media Folder (on network neighborhood) for users.

Media Folder Management

Configure share mode for accessing Media Folder (on Network Neighborhood).

Choose one of the following shared folder modes:

- Do not share Media folder
- Share mode (no password required)
- User mode (password required)
 - Change User mode password
 - Username
 - Password
 - Confirm password

The access is only allowed from IP address:

Do not share Media folder	The folder will not be shared.
Share mode	Select "Share mode" if you allow open access of all users. In this mode, users can access the folder without username and password.
User mode	In "User mode", users need to enter username and password to access the folder. If you only want to allow access from a particular user, enable this function and change its username and password. Default Username: smbuser Default Password: smbuser
The access is only allowed from IP Address	To allow access from particular IP address or subnet, enter the IP address or partial IP address, e.g. type " 172.16.0.1 " to allow access only from this IP address, or type " 172.16.0. " to allow access from all computers in this subnet.

5. System Status and Settings

5-1 System Status.....	42
5-1-1 Basic Information	42
5-1-2 Advanced Information	43
5-1-3 Firmware Information.....	44
5-2 System Management and Firmware Update	45

5-3-3 Screen Rotation (Only for SMP-WEBPLUS)	52
5-3-4 Turn on / Turn off Display	53
5-4 Video Input Settings (SMP-WEB3 only)	54

In this chapter you can access comprehensive system information about a SMP-WEB series player. You can also configure system settings.

5-1 System Status

Login Web Manager of SMP; then you will see the "SYSTEM STATUS" page.

5-1-1 Basic Information

You can check the Hostname, Product Model, Firmware Version, and Date/Time of a SMP-WEB series player in this section. You can specify the hostname in “6-1 Ethernet” section, and change the date/time/time-zone in “5-2-1 Set System Time” section.

Basic Information
Basic information of system status

Hostname: SMP-WEB
Product Model: SMP-WEB
Firmware Version: 4.0 ,Build 07031
Current Date and Time: 2007/02/27 03:56:04
Time Zone: (GMT+08:00) Taipei

5-1-2 Advanced Information

In this section, you can check all detailed information about this SMP player in the following table.

Advanced Information	
Advanced information of system status	

CPU Utilization: Usage 0.0%	
Memory Usage: Total 233MB , Used 183MB , Usage 78.5%	
System Disk Usage: Total 159MB , Used 110.1MB , Usage 68.9%	
Media Folder Usage: Total 18GB , Used 1.3GB, Usage 7.3%, view files.	

Ethernet	
IP Address: 172.16.2.239 Subnet Mask: 255.255.0.0	
Gateway: 172.16.0.1	
MAC Address: 00:40:F4:8A:75:51	
DNS1: 168.95.1.1 DNS2: 139.175.55.244	

Screen Resolution: 1024x768 (Real: 1024x768)	
Refresh Rate: Auto (Real: 70 Hz)	

CPU Utilization	Usage of CPU
Memory Usage	Usage of system DRAM
System Disk Usage	Disk usage of system firmware disk. If the usage exceeds 90%, we strongly suggest that you do not upload more patches for preventing from disk overloaded.
Media Folder Usage	Disk usage of Media Folder. If you run out of disk space, you will not be able to add more media files in Media Folder.
Resource Disk Usage	SMP-WEB3/WEB3N only. It's the reserved space for future use.
Network information	You can check IP address and other related network information here. For a wireless connection, you can also check the access point (SSID) and security settings.
Display Information	You can check both the real and selected resolutions and refresh rates of the connected display.

5-1-3 Firmware Information

You can check all updated patches information here.

Firmware Information
System firmware information
0 patch(es) in the current system.

5-2 System Management and Firmware Update

In this section, you can configure basic system settings and maintain the system with firmware update, system restart, and system shutdown.

5-2-1 Set System Time

You can set the system date and time manually for the SMP player.

1. Login SMP-WEB/WEBPLUS Web Manager. Click **[SYSTEM]** and switch to “SYSTEM” page.
2. Enable “Set system time” and enter the year, month, date (YYYY/MM/DD), hour, minute, and second (HH/MM/SS). Then, click **[SAVE]** and **[APPLY]**.

The screenshot displays the 'System Settings' page in the SMP-WEB Web Manager. The interface includes a sidebar with a menu where 'SYSTEM' is selected. The main content area shows the current system date and time as 2007/2/27 04:17:31. A checkbox labeled 'Set system date and time' is checked. Below this, there are input fields for the date and time components: Year (2007), Month (Feb), Day (27), Hour (04), Minute (17), and Second (28). The Time zone is set to '(GMT+08:00) Taipei'. There are radio buttons for 'Disable NTP service' (which is selected) and 'Enable NTP service'. An 'NTP Server' field is present but empty. At the bottom of the settings area, there are 'Update Now' and 'Test' buttons, and a '(Status: *)' label.

5-2-2 NTP Service

You can choose NTP function to synchronize the clocks of media players from an NTP server automatically (e.g. time.nist.gov).

SMP-WEB/WEBPLUS will update the system time from NTP server every 7 days or when the system restarts.

1. Login SMP-WEB/WEBPLUS Web Manager. Click **[SYSTEM]** and switch to “SYSTEM” page.
2. Click “Enable NTP service”, and enter the address of the NTP server.
3. Click **[Update now]** to update the time immediately. You can also click **[Test]** to verify the availability of the NTP server.
4. Click **[SAVE]** and **[APPLY]**.

The screenshot shows the NTP service configuration interface. It features two radio buttons: "Disable NTP service" (unselected) and "Enable NTP service" (selected). Below the radio buttons is a text input field labeled "NTP Server:". To the right of the input field are two buttons: "Update Now" and "Test". Further to the right is the text "(Status: *)".

5-2-3 Change Web Administrator's Password

To change administrator's password of SMP, check the box and enter the password.

The screenshot shows the "Change web administrator's password" section of the web manager interface. It includes a checkbox labeled "Change web administrator's password:". Below this checkbox are three input fields: "Username" (containing "webadmin"), "Password", and "Confirm password". Below these fields is another checkbox labeled "Change service port of Web Manager:". Below this checkbox is an input field for "Port number" (containing "80"). At the bottom of the form is a dropdown menu for "Web Manager Language" (set to "English").

5-2-4 Change Service Port of Web Manager

You can change to a suitable port number to fit your network environment. The default port number of Web Manager is 80. We suggest that you use the port number larger than 1024, so that the new port number will not be in conflict with other services.

After changing the port number, you have to add the port number to the URL to connect to Web Manager. (e.g. <http://172.16.0.100:8080>)

<input type="checkbox"/>	Change web administrator's password:
Username	<input type="text" value="webadmin"/>
Password	<input type="password"/>
Confirm password	<input type="password"/>
<input type="checkbox"/>	Change service port of Web Manager:
Port number	<input type="text" value="80"/>
Web Manager Language : <input type="text" value="English"/>	
Set system reboot at	
<input type="checkbox"/>	<input type="text" value="0"/> o'clock
<input type="checkbox"/>	<input type="text" value="0"/> o'clock
<input type="checkbox"/>	<input type="text" value="0"/> o'clock

5-2-5 Choose Web Manager Language

SMP-WEB series supports six build-in languages, which are English, French, German, Spanish, Traditional Chinese, and Simplified Chinese. Select here for changing the whole Web Manager's language setting.

Change web administrator's password:
Username
Password
Confirm password

Change service port of Web Manager:
Port number

Web Manager Language :

Set system reboot at

o'clock
 o'clock
 o'clock

5-2-6 Set System Reboot

You can assign up to three particular time sections within a day that SMP player will restart automatically.

Enable “Set system reboot at” function, and choose a specific time. Then, click [**SAVE**] and [**APPLY**].

Change web administrator's password:
Username
Password
Confirm password

Change service port of Web Manager:
Port number

Web Manager Language :

Set system reboot at

o'clock
 o'clock
 o'clock

5-2-7 Firmware Update

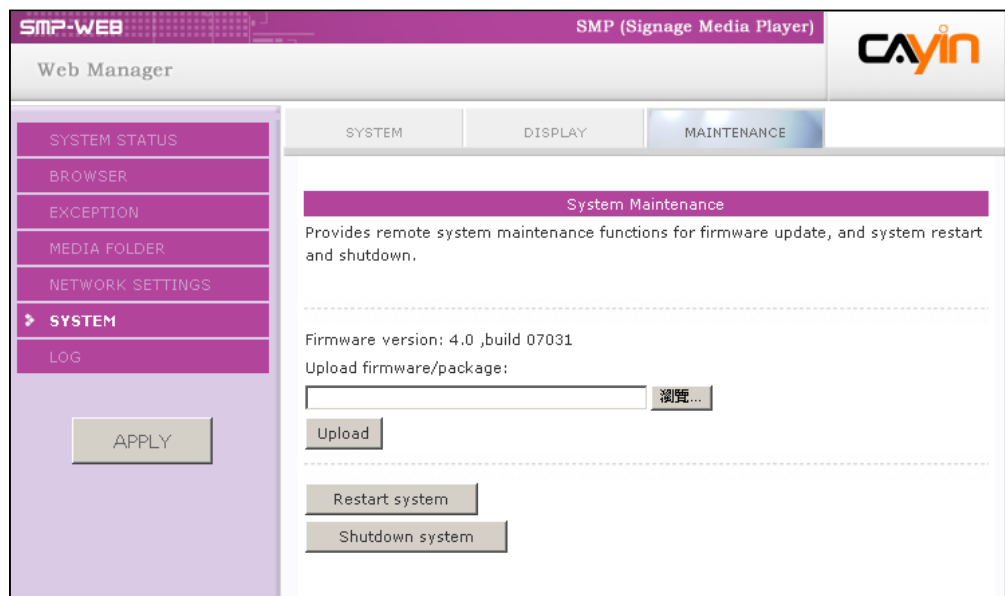

NOTE

Please only upload firmware provided by Cayin. Do not upload unknown firmware and damage the system.

You can update new firmware of SMP in the “System Maintenance” page. We suggest you update the firmware when your PC and the player are in the same LAN.

You can restart or shut down the system by clicking the corresponding button at the end of the page.

1. Login SMP-WEB/WEBPLUS Web Manager. Click **[SYSTEM]** and switch to “MAINTENANCE” page.
2. Click **[Browse]** and select a file; then click **[Upload]**. The extension of a firmware file is “.psu” or “.fsu”.

3. After successfully uploading, the system will re-start. The system will inform you the uploading status after uploading. If you fail to upload the firmware, please make sure that the firmware is used for this model of media player.

5-3 Display Settings

In this section, you can configure those settings related to the display.

5-3-1 Hide Cursor

Enable this option to hide mouse cursor on displayed screen.

1. Login SMP Web Manager. Click **[SYSTEM]** and switch to “DISPLAY” page.
2. Enable the function “Hide cursor”.
3. Click **[SAVE]** and **[APPLY]**.

The screenshot shows the SMP (Signage Media Player) Web Manager interface. The top navigation bar includes 'SMP-WEB', 'SMP (Signage Media Player)', and the 'CAYIN' logo. The main content area is titled 'Web Manager' and has three tabs: 'SYSTEM', 'DISPLAY', and 'MAINTENANCE'. The 'DISPLAY' tab is active, showing the 'Display Settings' section. A red box highlights the 'Hide cursor' checkbox, which is checked. Below this, there are several settings: 'Screen Resolution' (1024x768), 'Refresh Rate' (auto), 'TV-Out Type' (NTSC), and 'TV-VScan' (Under). There are also 'Display On/Off' buttons (Off and On), a 'Turn off display daily from' section with HH and MM dropdowns, and a 'Turn off display on:' section with checkboxes for Mon, Tue, Wed, Thu, Fri, Sat, and Sun. An 'APPLY' button is located in the left sidebar, and a 'SAVE' button is at the bottom right.

5-3-2 Display Information

In this section, you can configure those settings related to the display. Please follow the following steps:

1. Login SMP Web Manager. Click [**SYSTEM**] and switch to “DISPLAY” page.
2. Please refer to the following table and select a suitable setting for you.

Screen Resolution :	1024x768 ▾
Refresh Rate :	auto ▾
TV-Out Type :	NTSC ▾
TV-VScan:	Under ▾

SMP-WEB

Screen Resolution	Include 640×480, 800×600, 1024×768, 1280×1024, 1280×768 and 856×480 screen resolutions
Refresh Rate	Support 5 modes: auto, 60, 70, 72, and 75
TV-Out Type	Support NTSC and PAL (Must configure through jumper) TV-out only applies on 640x480 and 800x600 resolutions.
TV-Vscan	Support 3 modes: Under, Over, and Fit

NOTE

SMP-WEBPLUS doesn't provide the options: “TV-Out” and “TV-Vscan”.

SMP-WEBPLUS

Screen Resolution	640x480, 800x600, 1024x768, 1152x864, 1280x1024, 1600x1200, 1280x720(720p), 1280x768, 1600x900, 1360x768, 1366x768
-------------------	--

SMP-WEB3/SMP-WEB3N

Screen Resolution	640x480, 800x600, 1024x768, 1152x864, 1280x1024, 1280x720(720p), 1280x768, 1600x900, 1360x768, 1366x768
Output	Display output to VGA D-SUB or Composite/S-Video Composite & S-Video only support NTSC/PAL in 800x600 screen resolution. (NTSC/PAL Must configure through jumper)

3. After completing settings, click [**SAVE**] and [**APPLY**] so that those settings will come into effect.

5-3-3 Screen Rotation (Only for SMP-WEBPLUS)

NOTE

In the “rotation” mode, SMP-WEBPLUS does not support to play HD video and two videos on one web page.

You can rotate the screen clockwise or counter-clockwise to display portrait presentations.

1. Login SMP-WEBPLUS Web Manager. Click **[SYSTEM]** and switch to “DISPLAY” page.
2. Locate the “Screen Rotation” function and select a suitable one for you.
3. Click **[SAVE]** and **[APPLY]**.

Display Settings

Configure display settings and properties in this section

Hide Cursor

Screen rotation:

Display command:

Turn off display from
HH MM to HH MM

5-3-4 Turn on / Turn off Display

NOTE

If you choose the display output from Composite/S-Video on SMP-WEB3/WEB3N, you will not be able to turn on/off the display remotely.

You can also use “Display Command” to turn on or turn off the screen remotely (by cutting down the VGA signal). You can also schedule the time period during which you hope to turn off the screen to save energy. Please follow the following steps:

1. Login SMP Web Manager
2. Click **[SYSTEM]** and switch to “DISPLAY” page.
3. Please refer to the following table for more functions.

Display command: Off On

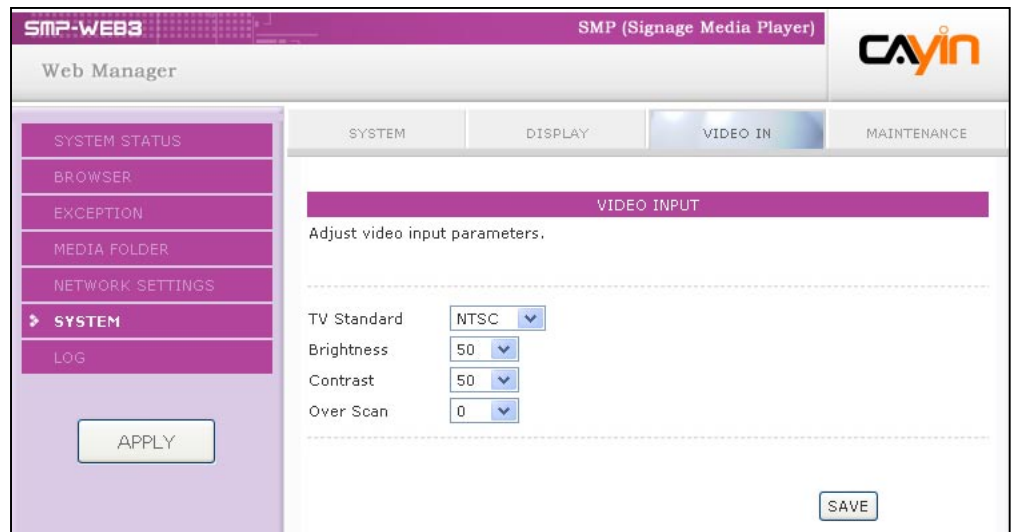

Turn off display from

HH MM to HH MM

Display command	Press [Off] to turn off the display; press [On] to turn on the display.
Turn off display daily from	Set a time period during which you hope to turn off the screen everyday
Turn off display all day long on the following day(s):	Set a specific day in weekly basis to turn off the screen. The screen will be turned off on the day you pick here.

5-4 Video Input Settings (SMP-WEB3 only)

1. Login SMP Web Manager
2. Click [SYSTEM] and switch to “VIDEO INPUT” page.
3. Please refer to the following table for all functions.

TV Standard	Set video input type. The input type can be NTSC, PAL and SECAM.
Brightness	To adjust the brightness from 0 to 100 by every 5 degrees.
Contrast	To adjust the contrast from 0 to 100 by every 5 degrees.
Over scan	To adjust the over scan from 0 to 100 by every 5 degrees. This option is for you to zoom in and out of video input signals.

6. Network Settings

6-1 Ethernet.....	56
6-2 Wireless Network	57
6-3 Off-Line Settings.....	58

In this section, you can assign a group name and hostname for a SMP player and define the network connection mode. SMP players with the same Group name will be managed altogether for content update and central scheduling.

6-1 Ethernet

NOTE

Check network by pinging gateway:

This function helps users to adjust IP configurations automatically whenever the DHCP network changes. Enable this function and SMP player will send out a ping packet every 3 minutes to check the gateway. If the gateway doesn't response, SMP player will try to repair the network connection automatically.

You can assign a group name and a hostname to a SMP player and configure the Ethernet network.

1. Login SMP Web Manager. Click **[NETWORK SETTINGS]** and switch to “ETHERNET” page.
2. Enter a “Group” name and a “Hostname” of SMP.
3. Select “DHCP Client” if the network supports DHCP protocol for obtaining the IP address automatically. To use static IP address, enter the relevant information in “Static IP Address” settings.
4. After completing settings, click **[SAVE]** and **[APPLY]** so that those settings will come into effect.

Ethernet Settings

Configure basic network settings.

Network:

Obtain IP by DHCP

Static IP address

IP address

Subnet mask

Gateway

DNS-1

DNS-2

Check network by pinging gateway

6-2 Wireless Network

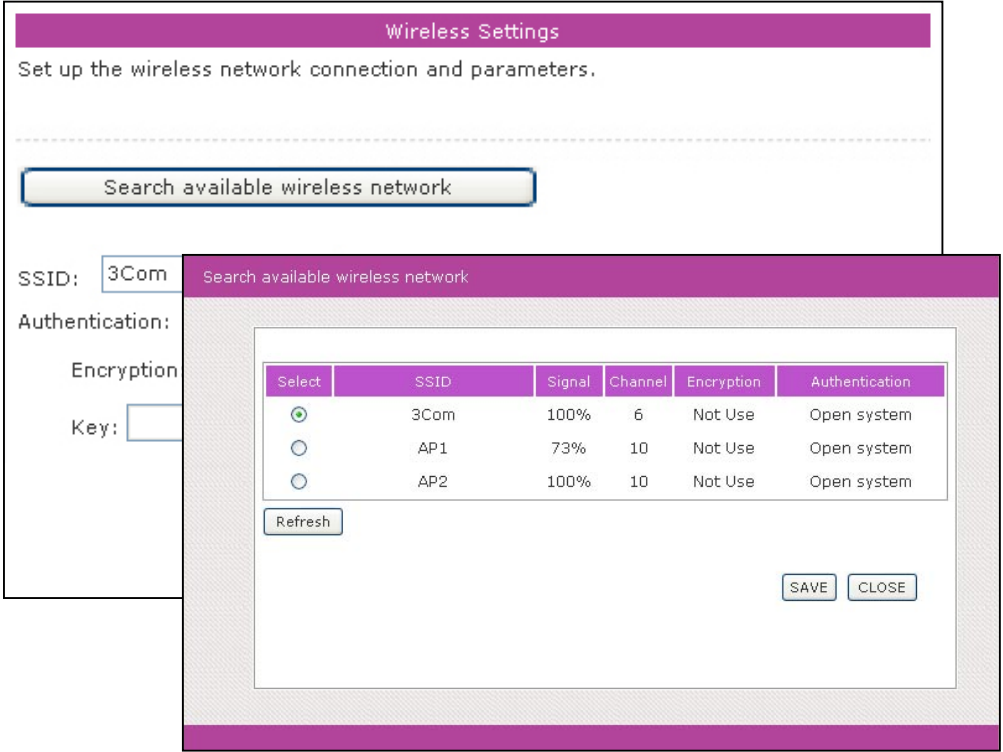

NOTE
 If you connect wired and wireless network to the player at the same time, the system will choose the wired one as the first priority, and will switch to the wireless one automatically when you unplug the wired Ethernet connection.

NOTE
 If you use WEP, the key will be 5 or 13 characters, 10 or 26 hexadecimal. If you use TKIP or AES, the key will be 8~63 characters.

NOTE
 We suggest you use static IP address for more stable Wireless connection.

If you attached a compatible USB Wi-Fi adaptor to a SMP player, you will see the page “Wireless Settings” and can configure all wireless network settings here.

1. Click “Search available wireless network” and choose a suitable wireless AP (Access Point). Please be aware that a low-signal AP may lead to an unstable connection and data loss.
2. Choose an appropriate authentication and encryption method. Normally, these settings can be detected automatically. Please enter the key if necessary.

3. Please specify the DHCP or static IP address for the wireless connection of the SMP player.

Please contact Cayin to purchase compatible USB Wi-Fi adaptors.

6-3 Off-Line Settings

NOTE

SMP-WEB series will play the default playlist specified in “Browser” section automatically when the connection to the remote server resumes.

In this section, you can set an alternative action when the remote server is disconnected. If you enable this feature, the SMP-WEB series player will try to send requests periodically to the URL set in “Checking following URL”. When a SMP-WEB series player fails to connect to the URL, it will take the alternative action to play contents in Media Folder, so that you will not suffer blank or error pages.

1. **Login SMP Web Manager.** Click [**EXCEPTION**] and you will see the “EXCEPTION” page.
2. **Check the box of “Enable Exception function”.**
3. **Assign a URL to detect the network connection.** SMP will send a request to the URL periodically to check the availability of the URL and determine if the network connection is OK or not.
4. **Enable “Check Network Every [...] seconds” and specify how often SMP-WEB/WEBPLUS should check the status of network connection.**
5. **Then, specify a playlist which you want to play during the network disconnection.** Or, select to show the login page of Web Manager when the network is disconnected.
6. **After completing settings, click [**SAVE**] and [**APPLY**] so that those settings will come into effect.**

Exception

In this section, a HTML file in the local Media Folder can be set as a spare display while the system is displaying content fed from a remote URL (set in Browser section). When this feature is enabled, SMP-WEB will periodically check the remote URL set in this section. When the connection to the URL is not found, SMP-WEB will display the local spare HTML file or Web Manager's login page.

Enable Exception function

Checking the URL

Check network status every seconds

When network disconnects, play:

7. LOG Management

7-1 Enable Syslog	60
7-2 View Logs.....	61
7-3 Export Log File	62

In this chapter, you can make related settings of log files. Log function helps you to create or read log records. Syslog function allows log software in your PC to retrieve log records and further analyze them.

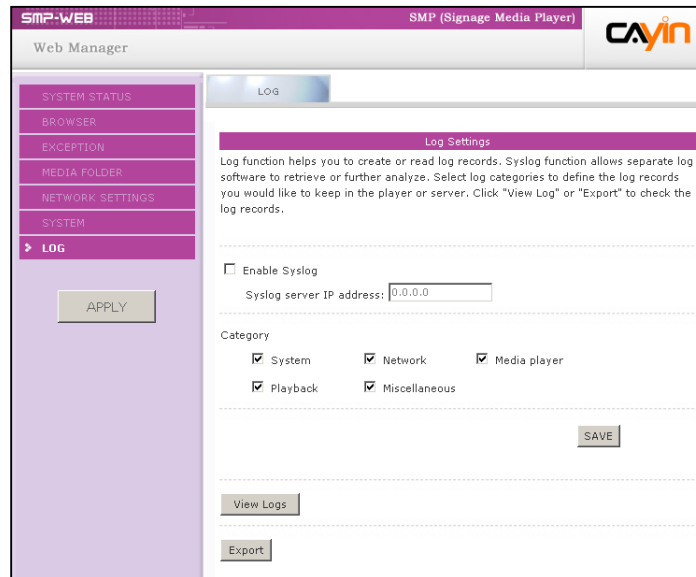

7-1 Enable Syslog

NOTE

You can purchase Cayin's log management tool, Super Reporter, to collect and manage all log records of players or servers.

You can enable syslog and send all log files to your designated server, so that you can monitor all activities of this player centrally.

1. Login SMP Web Manager, and go to the **[LOG]** page.
2. Click “Enable Syslog” and enter the IP address of your designated server.
3. You can select log categories to define those log records you would like to keep in the player or server.

System	system status change or system error
Network	network status or configuration change
Media Player	status of media player
Playback	file name, duration, and status of playback
Miscellaneous	other log files

4. After completing settings, click **[SAVE]** and **[APPLY]**.

7-2 View Logs

You can check log records in a SMP player.

1. Login SMP Web Manager, and go to the [LOG] page.
2. Click [View Logs]; then the log dialog-box will pop up. You can check all log files in your selected categories.

The screenshot shows the SMP-WEB Web Manager interface. The left sidebar contains navigation options: SYSTEM STATUS, BROWSER, EXCEPTION, MEDIA FOLDER, NETWORK SETTINGS, SYSTEM, and LOG (highlighted). An APPLY button is visible below the sidebar. The main content area is titled 'LOG' and contains 'Log Settings' instructions, an 'Enable Syslog' checkbox with a Syslog server IP address field (0.0.0.0), and a 'Category' section with checkboxes for System, Network, Media player, Playback, and Miscellaneous. A SAVE button is at the bottom right. A 'View Logs' button is highlighted with a red box. Below the main interface, a 'View Logs' dialog box is shown, displaying a table of log records.

Date / Time	Type	Category	Message
Wed Mar 7 17:00:16 2007	INFORMATION	SYSTEM	[SMP-WEBPLUS]: PLAYBACK: Default playlist changes from 3 to 0.
Wed Mar 7 17:01:13 2007	INFORMATION	SYSTEM	[SMP-WEBPLUS]: SETTING: SYSTEM
Wed Mar 7 19:15:08 2007	INFORMATION	SYSTEM	[SMP-WEBPLUS]: PLAYBACK: Add a new playlist item.
Wed Mar 7 19:15:12 2007	INFORMATION	SYSTEM	[SMP-WEBPLUS]: PLAYBACK: Default playlist changes from 0 to 1.
Wed Mar 7 19:15:15 2007	INFORMATION	SYSTEM	[SMP-WEBPLUS]: SETTING: PLAYBACK

7-3 Export Log File

NOTE

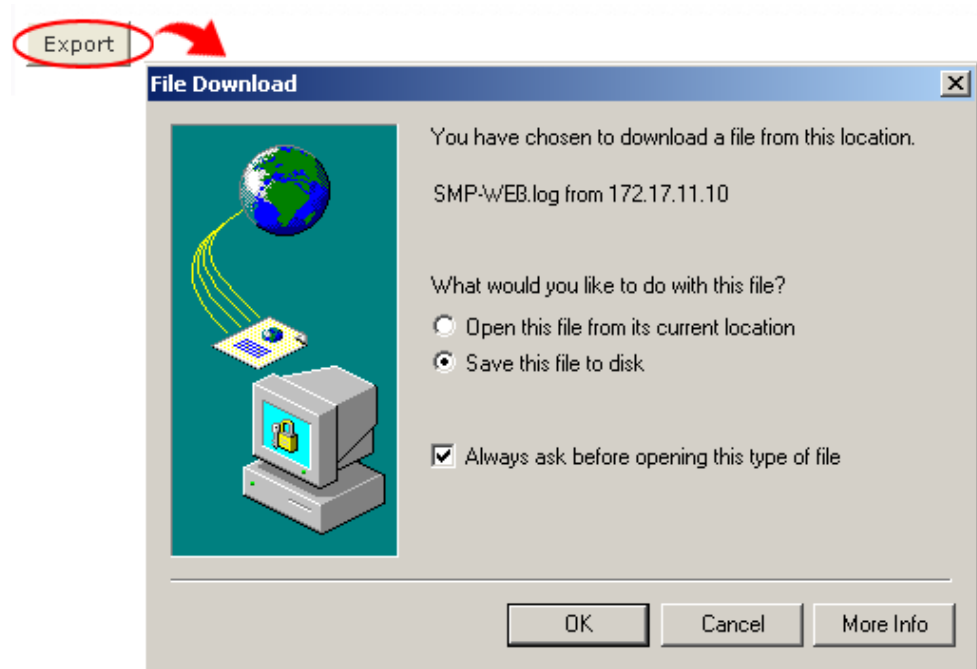

The export procedures will vary from browser to browser. Please follow the instructions of your browser.

NOTE

If you configure the “Pop-up Blocker” in your browser, the Export function will not be able to function properly. Please turn off your Pop-up Block or add SMP web manager in the “Allow Web sites list”.

You can export the log records; then, edit or analyze with your favorite text editor software, such as Notepad, Excel, etc.

1. Login SMP Web Manager, and go to the [LOG] page.
2. Click [**Export**]; then, you can export and save the log files as “abc.log”.

8. SMP Console

By pressing CTRL-ALT-Backspace, you can exit GUI mode into text console to make some low-level management. After you configure here, those changes take effect after the system restarts.

Viewing System Information

View firmware, CPU, memory, and disk information.

Network Management

Configure Ethernet network.

System Update

Upload system update file or patch (.fsu or .psu) file from a USB storage device. Contact your vendor for these files, store them in a USB flash disk (FAT32) and insert the USB device into SMP player's USB socket. You can upload files here or from the Web Manager.

Manage Storage (Expert Only)

Manage (formatting) storage, Hard-Disk or USB storage device. Please consult your system administrator for using these functions.

Format Internal Hard-disk

This function is especially for those system maintainers who need to format the internal slim hard-disk. Please note that this function will format your hard-disk and you will lose all data in the disk. Follow the questions in the procedure.

USB storage device

Partitioning and formatting USB storage devices (e.g. flash disk). This function is applied when the format of some USB storage devices is not compatible with SMP.

Reset Password

Reset the Web Administration's password to admin.

Restart

Restart the system.

Shutdown

Shutdown (turn-off) the system.

9. System Recovery

NOTE

You can try to recover the system firmware first, and type “N” for the configuration recovery. If it works for you, all configurations will be kept after system is restored. If it doesn’t work, you can enter system recovery function again, and type “Y” in the configuration option.

If you encounter any unrecoverable problem (e.g. unable to boot up) while using SMP client, you can choose this function, System Recovery, to restore your system firmware to factory default. Follow the steps below to recover the system:

- 1. Start or Restart the SMP system with keyboard connected to the box.**
- 2. Keep press the TAB key while power on until the boot loader menu appear (cayinos & recovery).**
- 3. Enter “recovery”, and press “enter”. If you want to recover the system without answering questions, you can enter “recovery automatic”. The program will skip step 5 & 6.**
- 4. While the recovery system boots up, follow the instructions.**
- 5. When the instruction “The system will recover to factory default.” is shown, please type “Y”. Then the system firmware will be restored to the original one, i.e. you have to upload all patches again after the system recovery.**
- 6. When the instruction “The configuration will recover to factory default.” is shown, you can choose to type “Y” and SMP will restore the configuration to the original one. You will lose all configurations which you made on this box, and you will be prompt to enter a new key for this box when you restart the system again. The key label is stucked behind the SMP device.**

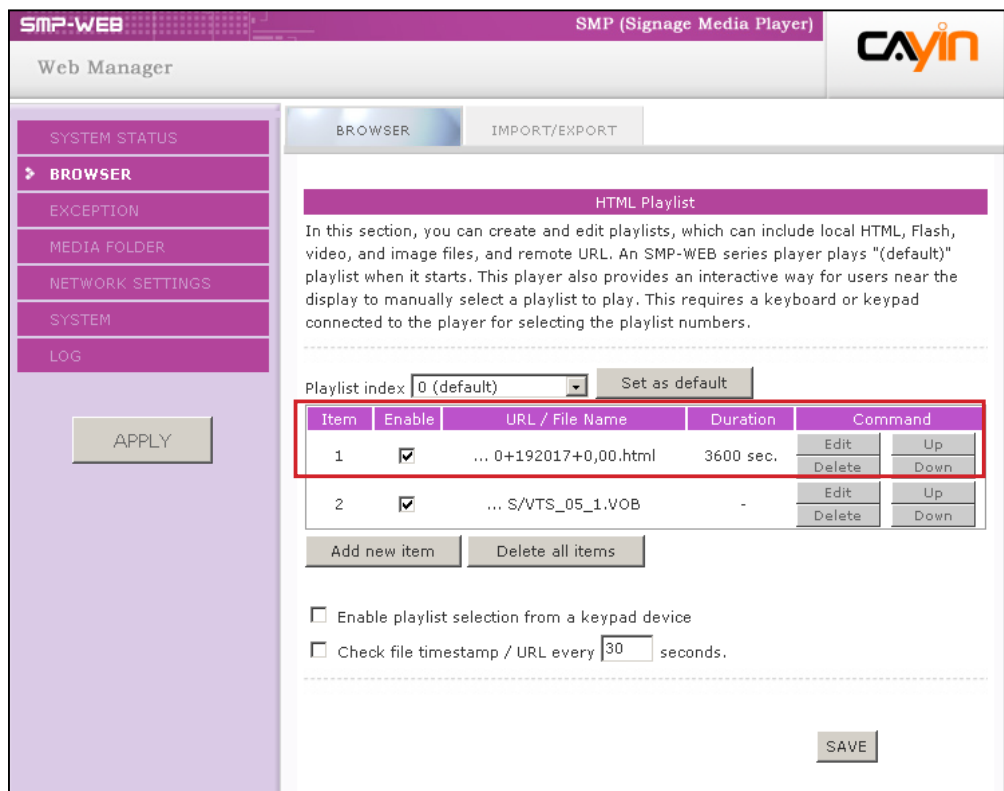

Appendix

Appendix A: Test The Resolution of Your Display.....	68
Appendix B: Use “log_rcv” to collect syslog from clients.....	70

Appendix A: Test The Resolution of Your Display

You can use the testing file in the product CD (\Tool\resolution_test\retest.html) to test the resolution of your display. By using this file, you can check the real presentation of your display, either when you install a SMP-WEB series player for the first time or change to a new display.

- 1. Insert the product CD into your CD-ROM, and copy these two files, retest.html and retest.jpg (\Tool\resolution_test), to the Media Folder of a SMP-WEB series player via Network Neighborhood.**
- 2. Login the Web Manger of the SMP. Click [BROWSER] and select the “BROWSER” page. Then, add this HTML file as an item in the default playlist.**
- 3. When the SMP player displays this file on the screen, you will see the current resolution of your screen indicated on the picture.**

The screenshot shows the SMP (Signage Media Player) Web Manager interface. The top navigation bar includes 'SMP-WEB', 'SMP (Signage Media Player)', and the 'Cayin' logo. The main content area is titled 'Web Manager' and has a sidebar on the left with menu items: SYSTEM STATUS, BROWSER (selected), EXCEPTION, MEDIA FOLDER, NETWORK SETTINGS, SYSTEM, and LOG. An 'APPLY' button is located below the sidebar. The main area has two tabs: 'BROWSER' (active) and 'IMPORT/EXPORT'. Below the tabs is a section for 'HTML Playlist' with a descriptive paragraph. A 'Playlist index' dropdown is set to '0 (default)' with a 'Set as default' button. A table lists playlist items:

Item	Enable	URL / File Name	Duration	Command
1	<input checked="" type="checkbox"/>	... 0+192017+0,00.html	3600 sec.	Edit Delete Up Down
2	<input checked="" type="checkbox"/>	... S/VTS_05_1.VOB	-	Edit Delete Up Down

Below the table are 'Add new item' and 'Delete all items' buttons. At the bottom, there are two checkboxes: 'Enable playlist selection from a keypad device' (unchecked) and 'Check file timestamp / URL every 30 seconds' (unchecked). A 'SAVE' button is at the bottom right.

Use the page to check the actual Resolution of your display.

Resolution (W x H)
W: 640 H: 480
W: 800 H: 600
W: 852/856 H: 720
W: 852/856 H: 768
W: 1024 H: 768
W: 1024 H: 900
W: 1024 H: 1024
W: 1280 H: 800
W: 1280 H: 960
W: 1440 H: 900
W: 1440 H: 1080
W: 1600 H: 1200
W: 1600 H: 1440
W: 1920 Full HD Movie Standard H: 1080 Full HD Movie Standard

CAYIN
Congratulations!
Your display supports Full-HD Resolution.

CAYINTECH.COM

Appendix B: Use “log_rcv” to collect syslog from clients

NOTE

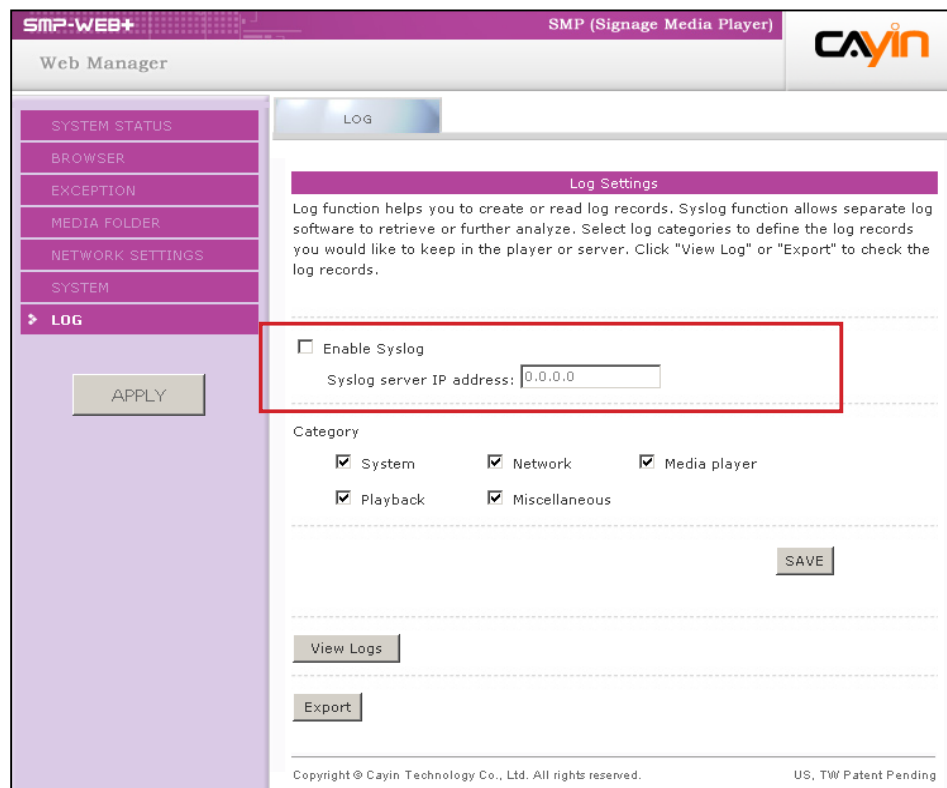

Don't run the program “log_rcv.exe” directly in the CD.

NOTE

If you install Super Reporter, the system will install log-rcv.exe automatically.

“log_rcv.exe” is a simple tool helping you to collect syslogs from SMP clients. You can find this program in product CD (\Tool\log receiver).

1. Copy this file to your hard-drive, and double click it.
2. Please set the SMP client's “syslog server IP address” as your PC's IP address (Chapter 2.8 LOG--> Enable Syslog).

3. Log_rcv.exe will start to receive the log messages from SMP clients and display the results on your PC's screen.
4. After log records are collected, Log_rcv.exe will generate 3 folders automatically, which are “log”, “billing”, and “content_update”. Each day, all collected log files from every client in that day will be saved in a subfolder which is named for the date.

log	All the log records are stored in daily basis and each host has its own files.
billing	<p>All playback log records are stored here for billing information. Each host has its own billing log file.</p> <p>SUMMARY.TXT [COUNT] section: Let you know for how many times those files have are played. [SUMMARY] section: Let you know how long (seconds) each file has been played.</p>
content_update	<p>Store all logs recording the name and the size of all files updated from a CMS server. The unit of the file size is "bytes". Each host has its own log file.</p> <p>SUMMARY.TXT [SUMMARY] section indicates the size of all files which are downloaded from a CMS server.</p>
